

What HAZARDOUS Materials

are Inside Most
Computers

- 1 Lead**
in cathode ray tube & solder
- 2 Arsenic**
in older cathode ray tubes
- 3 Selenium**
in circuit boards as power supply rectifier Polybrominated flame retardants
- 4 Polybrominated Flame Retardants**
in plastic casings, cables & circuit boards
- 5 Antimony**
as flame retardant

- 6 Selenium**
in circuit boards & semiconductors
- 7 Selenium**
in steel for corrosion protection
- 8 Cobalt**
in steel for structure & magnetivity
- 9 Mercury**
in switches & housing
